Dear Colleagues,

As announced at last week's collaboration meeting, Gina Rameika will be joining Flavio Cavanna and Christos Touramanis as a third ProtoDUNE-SP coordinator focusing primarily on detector construction activities. In addition, Flavio and Christos have been working hard over the past several months to finalize the structure of the ProtoDUNE-SP organization and identify candidates to fill the needed roles. Based on this work, we are now able to release an updated organizational chart for the ProtoDUNE-SP organization (see attached). Note that this structure incorporates several new joint SP/DP working groups, which are being formed to address common issues affecting both ProtoDUNE detectors. On tomorrow morning's collaboration call, I will give a short presentation to further elaborate on the different elements within this organizational structure and answer any questions.

Thanks,
Eric
